Production Tech Specs

American Music Theatre is a modern, 1607-seat, Proscenium Theater located in historic Lancaster, PA.

In addition to touring artists, AMT produces a series of Original Shows from March through December.

AMT requests that all current Stageplots, Input Lists, Tech Riders and Hospitality Riders be provided directly to the Production Department.

AMT employs a dedicated and hard-working Production Team who look forward to making sure that your event is executed smoothly from load in to load out.

Stage Dimensions

- Proscenium Width: 56'
- Proscenium Height: 24'
- Stage Depth: 34' w/crossover behind US wall
- Apron: 13' at center line
- Trim Height: 24'
- Grid Height: 61'

Load-In & Parking

Parking for tour busses and/or semi's is located directly behind the stage.

There is no shore power; however busses may run their generators with no restrictions.

Loading doors at Stage level:

- Covered loading dock, 7'11" x 8' door
- Ramp to stage level, 12' x 12' door

AC

All Electrical needs including stage, sound and backline power must be advanced with AMT.

- 100A, 3-phase, to cam-loc's, SR
- 600A, 3-phase, to cam-loc's, SL

Rigging

All rigging needs must be advanced with AMT. We have accommodated very complex rigging plots for Broadway tours, but due to the construction of our grid flexibility is required. All bridles must hang below the walking grid indicated below and pass through 10" loft wells to reach the high steel.

Loft wells run perpendicular to the proscenium at Center Line, and 9', 18', 27', and 36' L & R of Center

There are no FOH sound rigging points downstage of the proscenium, therefore most artists stack their PA on the apron as opposed to flying it.

FOH Lighting Truss rigging points are available. See the attached Rigging Plan.

AMT can usually clear linesets for moving lights, backdrops, etc. when advanced.

- High Steel: 61'
- Walking Grid: 55'

Audio

Our in-house PA System consists of Clair Brothers R3T's and ML18 subs with Crest amplification and DBX Driverack EQ. We also have (2) Yamaha PM5d-RH's. All other sound and backline needs must be advanced.

- (3) Clair Brothers R3T's per side, built into the proscenium
- (4) Clair Brothers ML18 subwoofers per side, built into the proscenium
- (4) Clair Brothers R3T's as center cluster, hung over the apron
- (4) EV Balcony Delay speakers
- (6) JBL Front fill speakers built into the apron

Lighting

AMT's house lighting plot is a "repertory plot" designed to accommodate our in-house productions as well as touring artists with minimal changes.

AMT can provide basic re-focusing to accommodate specific needs, however any necessary requirements above and beyond this must be advanced.

Lighting consists of (4) electrics, four side ladder positions, and two FOH catwalks.

All conventional fixtures (PAR and leko) are ETC Source 4. All color scrollers are Wybron Coloram II.

Please see the attached lighting plot for more information.

Console

ETC EOS Console, with up to 80 submasters /playback faders and 4 DMX universes.

Updated 1/09/16

Subject to Change

Note to LD's who carry their own console: Use of all AMT intelligent fixtures, conventionals, and scrollers in the plot requires four universes of DMX.

Spotlights

- (2) Lycian 1275 Long Throw Follow Spot (on catwalk above seating)

Misc.

- Black velour fiber-optic "star drop" as upstage backdrop (cannot move)
- Black velour fiber-optic "star legs" (2) per side (cannot move)
- DF-50 hazer
- Ultratec Radiance Hazer

Video

AMT has two large projection screens (144"x192") hanging in the house on either side of the stage. Projecting onto these screens are Panasonic PT-EX800 LCD projectors at 7500 lumens each. These projectors are used for preshow ads and can be used for IMAG or show video.

AMT can accept composite, VGA, and HDMI signals from either side of the stage or the balcony control booth.

AMT has three Sony VX2000 3 CCD cameras that can be used to provide IMAG.

Staging & Backline

- (10) 4' x 8' riser sections w/ skirting (misc. 12", 18" and 24" legs)
- Baldwin 7-foot concert grand piano

Hospitality & Catering

AMT requests that all current hospitality riders be provided to the Production Department directly. We do not have kitchen facilities in-house, so all food needs must be advanced prior to your show.

AMT is a dry venue and therefore does not provide alcoholic beverages. Please plan on stocking your bus at the previous venue if necessary.

AMT is a non-smoking venue. We ask that smoking be confined to outside the loading dock area or on the Greenroom balcony.

Wired Ethernet connections and WiFi are available throughout the venue.

A small Guest Production Office is located backstage and contains two tables, a multi-line phone, a wired Ethernet connection, WiFi, and a private bathroom.

If required, faxes can be sent to and from our main office fax #, (717) 397-7850. Please request that all incoming faxes be marked "Attention Guest Production".

Dressing Rooms are located one story above stage level and are accessible by stairs or elevator.

- (2) "Star" Rooms with full private bath
- (3) Large "Chorus" dressing rooms

Updated 1/09/16

Subject to Change

- Small Office with Wifi, Wired Ethernet, and a multi-line phone
- Men's bathroom w/ showers
- Women's bathroom w/ showers
- Greenroom w/ meal seating and buffet tables
- Clothes Washers and Dryers
